Destination address

Try to positioning the address lines within this recomended box to allow the address to move slighly within the envelope.

Optical mark recognition area

160mm 15mm 98,5mm

This template has been created to aid you in qualifying your document template for use in the print service.

Black lines and text indicate the measurement used in our service to qualify if a document needs a cover sheet with address or not. If an address exceeds the boundaries given in this document a cover sheet will be added.

Red lines and text indicate the optimal positioning of the address to allow the document to move in the envelope. Try to position your address as close to the suggested placement as possible.

Blue boxes indicate areas which shall be clear from image or text data as these are used for optical quality assurance. Image and text data within the blue boundries will be cropped to give room for optical marks.

Please note: when printing this form with Adobe Acrobat Reader change the default print setting from shrink to fit page to Normal (no document scaling). If the template is scaled in the printing process measurement will not be correct.
